                                                                                          source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence is the entire insert of clone 633H17. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TGGCCAATATCTCCCATTTGGAATGGCTGTATTTATCCAATGCCTGTACCCCCATTGTAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TTAAGATTTGACTGTCCCACTGGATCTCAGACTTCCATGGGGCCTGTAGCCTCTTTGTTT

124531 bp DNA linear PRI 07-FEB-2000 Human DNA sequence from clone 633H17 on chromosome 1p31.2-32.2. Contains a pseudogene similar to part of MTCO1 (Cytochrome C oxidase 1), MTCO2 (cytochrome c oxidase II), MTATP8 (ATP synthase 8) and GOT2 glutamic-oxaloacetic transaminase 2, mitochondrial (aspartate aminotransferase 2) pseudogenes, ESTs and GSSs, complete
                                                                                                                                                                                                                                                                                                                                                                                                      This sequence was generated from part of bacterial clone contigs human chromosome 1, constructed by the Sanger Centre Chromosome Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to the 5602 nucleotide sequences defined in the specification, where the complementary strand of a polynucleotide which comprises one of coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 end complementary to a polynucleotide which comprising a sequence complementary to a combination of sequence and an oligonucleotide comprising a sequence complementary to a coligonucleotide which comprises a 3 end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5 end sequence/3 end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and comparises are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH33162 to AAH13628 and COMANBS and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

RHD gene deletion in Rh negative haplotypes. The Rhesus genes

clocus comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box

and/or the downstream Rhesus box. The RHD and RHCE genes are located at

chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the

RHD deletion in the common RHD negative haplotypes. The sequence has

been used to design primers which are useful for: (1) the specific

detection of the common RHD positive haplotypes in D-negative

individuals; (2) blood group typing; (3) determining whether a patient

can be transfused with RhD negative blood and whether blood is suitable

for transfusion to patients who should not be exposed to antigen C; (4)

assessing the risk of a RhD negative mother of conceiving or carrying an

RhD positive foetus. Anti-D antibodies are useful for treating pregnant

women who are Rhesus D negative, where the foetus is not homozygous for

the RHD gene to treat or prevent haemolytic disease of the newborn.

The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the RHD deletion in the common RHD negative haplotypes. The sequence has been used to design primers which are useful for: (1) the specific detection of the common RHD positive haplotypes in D-negative Individuals; (2) blood group typing; (3) determining whether a patient can be transfused with RhD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigen C; (4) assessing the risk of a RhD negative mother of conceiving or carrying an RhD positive foetus. Anti-D antibodies are useful for treating pregnant women who are Rhesus D negative, where the foetus is not homozygous for the RHD gene to treat or prevent haemolytic disease of the newborn.

         The sequence represents the coding sequence of Rhesus gene locus: downstream Rhesus box of D positives. The Rhesus genes locus comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the Rhesus box (es), preferably the hybrid Rhesus box, the upstream Rhesus b and/or the downstream Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the RHD deletion in the common RHD negative haplotypes. The sequence has been used to design primers which are useful for: (1) the specific detection of the common RHD positive haplotypes in D-negative individuals; (2) blood group typing; (3) determining whether a patient can be transfused with RhD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigen C; (4) assessing the risk of a RhD negative mother of conceiving or carrying a seessing the risk of a RhD negative mother of conceiving or carrying a

                                                                                         The sequence represents the coding sequence of Rhesus gene locus:

CC hybrid Rhesus box of RHD negatives. The Rhesus genes locus

CC comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

CC comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

CC Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box

CC Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box

CC and/or the downstream Rhesus box. The RHD and RHCE genes are located at

CC chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the

CC RHD deletion in the common RHD negative haplotypes. The sequence has

CC been used to design primers which are useful for: (1) the specific

CC detection of the common RHD positive haplotypes in D-negative

CC detection of the common RHD positive haplotypes in D-negative

CC didividuals; (2) blood group typing; (3) determining whether a patient

CC can be transfused with RhD negative blood and whether blood is suitable

CC can be transfused with RhD negative blood and whether blood or carrying an

CC casessing the risk of a RhD negative mother of conceiving or carrying an

CC women who are Rhesus D negative, where the focus is not homozygous for

CC the burn are a transfused whether the focus is not homozygous for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Flegel WA,

amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 24 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; anglogenic stoorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy;
gastrointestinal disorders, prodisorders, and infections. The healing and epithelial cell pro
                                                                                                                                                                                                            AAD05121-AAD05203 represent cDNAs corresponding to 24 human secreted protein genes, and AAE01232-AAE01311 represent the proteins they encou AAE01312-AAE01340 represent human secreted protein variants or fragmer. The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1817

These can be in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encodiprotein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fragments of a SPINKS clone, sequencing primers and PCR primers for SPINKS. SPINKS encodes lympho-epithelial Kazal-type related inhibitor (LEKTI), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINKS gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINKS gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Determining susceptibility to atopic disease or carrier status netherton's syndrome in humans by identifying variants of or muin SPINK5, a gene encoding lympho-epithelial Kazal-type related inhibitor

Sequences AAS44359-AAS44514 represent the SPINK5 gene, contigs and carriers of a SPINK5 clone, sequencing primers and PCR primers for SPINK5. SPINK5 encodes lympho-epithelial Kazal-type related inhibitor: C(LEKTI), a serine protease inhibitor. Susceptibility or predisposition to can atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINK5 gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINK5 gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome, as the eczena and haviever.

These can be in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoprotein of the invention.

                                                                                                                                                                                                                                                                                                                                                                               CC The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of CC the 5602 nucleotide sequences defined in the specification, where the CC complementary strand of a polynucleotide which comprises one of CC the 5602 nucleotide sequences defined in the specification, where the CC complementary strand of a polynucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC complementary to a sequence complementary to a CC polynucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primers sets can be used in antisense therapy and CC particularly full-length cDNAs. The primers are also useful for the company of the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH3633 to AAH13742 represent human cDNA sequences; AAB92446 to CC AAH3633 to AAH13742 represent human cDNA sequences; AAB9246 to Of the present invention.
                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                        Db 438788
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an isolated peptide (I) consisting of an cannot acid sequence selected from: (a) the amino acid sequence of a variant of the oestrogen receptor alpha (ESR-alpha) protein in AAG68251; or (b) a fragment comprising at least 10 contiguous amino acids of the protein in AAG68251. (I) has cytostatic, osteopathic, cardiant and vasotropic activities, and can be used in gene therapy and vaccine production. (I) is useful for identifying an agent that binds to (I), by contacting (I) with an agent and assaying the contacted mixture to determine whether a complex is formed with the agent bound to the peptide. A polynucleotide (II), encoding (I), is useful in the development of diagnostics and therapies for diseases and disorders mediated/modulated by an oestrogen receptor (ER). (II) is also useful in contacted present sequence represents the human ESR-alpha gene is located on chromosome 6. The correspondence of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II) The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or Quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations and cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at figure and produces.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC AIDS, autcimmune diseases (e.g., rheumatoid arthritis), inflammation, cc allergies, neurological disorders (e.g., Alzheimer's disease, cognitive disorders, schizophrenia, asthma, cc skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc cardiovascular disorders, angiogenic disorders, kidney disorders, cc gastrointestinal disorders, angiogenic disorders, kidney disorders, cc disorders, and infections. The proteins can also be used to aid wound can be alloy and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Cc Antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked cimmunosorbent assay (ELISA). The present sequence represents a human or the invention.

CC The invention relates to isolated polynucleotide (I) and CC polymerase (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CPCR) primers of (II) are therapy techniques or identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) are polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC art from wino his human of the product of the company of the com
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  299
